

EMS Manager: improve your environmental performance.

An EMS is simply the best way to save yourself time and money. By using EMS Manager you couldn't have a more efficient way of improving the environmental performance of your organisation.

What are the benefits of having an EMS?

Implementing an Environmental Management System (EMS) helps reduce and control your organisation's energy consumption and waste, thus reducing your overall environmental impact including your carbon footprint. There are many benefits for your organisation when you use the Loreus EMS suite of tools. They are:

Reduce carbon, raw material, waste and energy costs

It makes financial sense for your organisation to understand and identify where there are opportunities to be more efficient and save costs in areas such as energy use and waste management.

Enhance your corporate image

There is increasing public scrutiny and stakeholder pressure on issues surrounding environmental performance and climate change. By improving your organisation's environmental performance, EMS Manager will help you to enhance your corporate image.

Gain environmental credibility

Having an EMS is a benchmark of good corporate governance. This will help in securing new clients and winning tenders.

Be ahead of the game

Change is coming. Minimise risk. It is better to lead rather than follow.

Reassure investors and insurers

Many investors are seeking to invest in companies that can demonstrate their environmental credentials.

Anticipate new legislative drivers

The government has set demanding targets for carbon reduction. This will eventually impact on all organisations. An EMS is the best way to manage your carbon

Achieve an EMS Standard

This suite of tools is designed to help you develop an EMS that meets British, European and International EMS standards such as BS 8555, EcoCampus, EMAS and ISO 14001.

EMS Manager: improve your environmental performance

Review your organisation

EMS Manager helps you to conduct an environmental review of your organisation to identify key areas that need to be addressed. It acts as a benchmarking tool for complying with best practice. It automatically produces an action plan for improvement in ten key areas and writes an environmental policy for you. It is the starting point for developing an environmental management system (EMS).

Assess the risks

It is important to assess the risks associated with your organisation's environmental impacts. **EMS Manager** helps you to do this in a logical and consistent way as required by most EMS standards. This process enables you to prioritise your objectives and targets for improvement.

Store and control your documents

EMS Manager keeps all your environmental documents and information up-to-date and organised. It effectively manages documents for you. It is easy to add and remove documents while keeping up-to-date with version control. It comes with a comprehensive set of EMS management procedures, templates and an EMS manual. This will save you a lot of time when developing and implementing your EMS.

Manage your tasks

EMS Manager is designed to help you structure the tasks associated with your EMS and manage workflow effectively. Specifically designed for environmental and carbon managers, this tool helps you to create, organise and track tasks efficiently and ensure that your objectives are delivered successfully and on time. It has a powerful Gantt chart function to see and manage all your tasks in one place.

Train your staff

EMS Manager comes with a web-based course for EMS Managers. These courses explain how to develop, implement and operate an EMS following different standards. You can choose either the BS8555, EcoCampus or ISO 14001 course. You may also wish to consider using our general environmental awareness course for engaging and informing your workforce. Our quality courses are ideal for training your staff in a cost effective and time efficient way.
